

Behaviour Driven Development with Cucumber

Asheesh Mehdiratta

@amehdiratta

How is your Journey?

Needs ?

Wants ?

Ambiguity?

Reality bites !

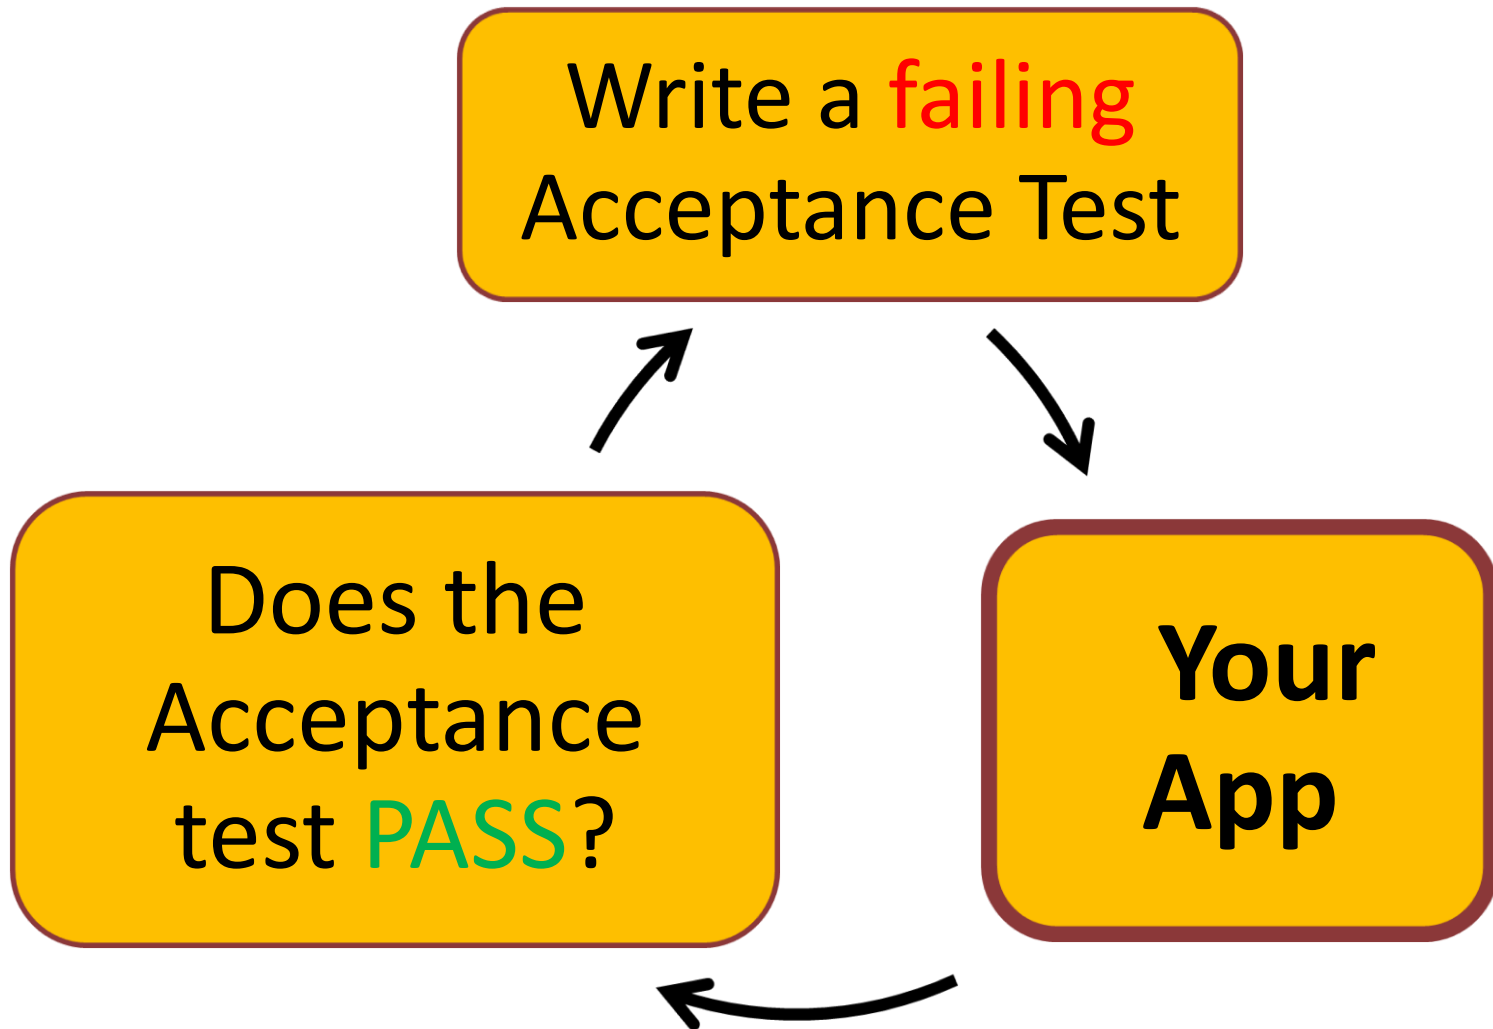

SOLUTION

NEED : Common Understanding

Acceptance Test Driven Development

GIVES: Outside In

GIVES: Ubiquitous Language

GIVES: Living Documentation

GIVES: Automated Acceptance Tests

Behaviour Driven Development

Implementing an application by describing its **behaviour** by the perspective of its stakeholders

- Dan North

**BDD uses Examples in
conversations to illustrate
behaviour**

– Liz Keogh

Specifications->Examples-> Tests

BDD / Specifications By Example

Writing an **Example** into 3 sections:

(Given) some context

(When) some action is carried out

(Then) a particular set of observable
consequences should obtain

Real Example

Given my bank account is in credit, and I made no withdrawals recently,

When I attempt to withdraw an amount less than my card's limit,

Then the withdrawal should complete without errors or warnings

BDD Toolbox

Specflow

Cucumber

Jbehave

Rspec

Easyb

Concordian

Robot Framework

and many more....

What is **Cucumber**?

Cucumber is a **tool** that executes plain-text functional descriptions as automated tests.

The language that Cucumber understands is called **Gherkin**.

But wait....**What is the INTENT of the Tool ?**

Cucumber Basics

Cucumber itself is written in **Ruby** but it can be used to “test” code written in Ruby or other languages including but not limited to Java, C# and Python.

Cucumber-JVM **for Java** supporting - Java, JavaScript, JRuby, Scala, Python, Groovy, Jython and JRuby

Gherkin

- Business Readable
- Domain Specific Language
- Describe software's behaviour without detailing how that behaviour is implemented.

Gherkin Sample

Feature: Hello World

Scenario: Say hello

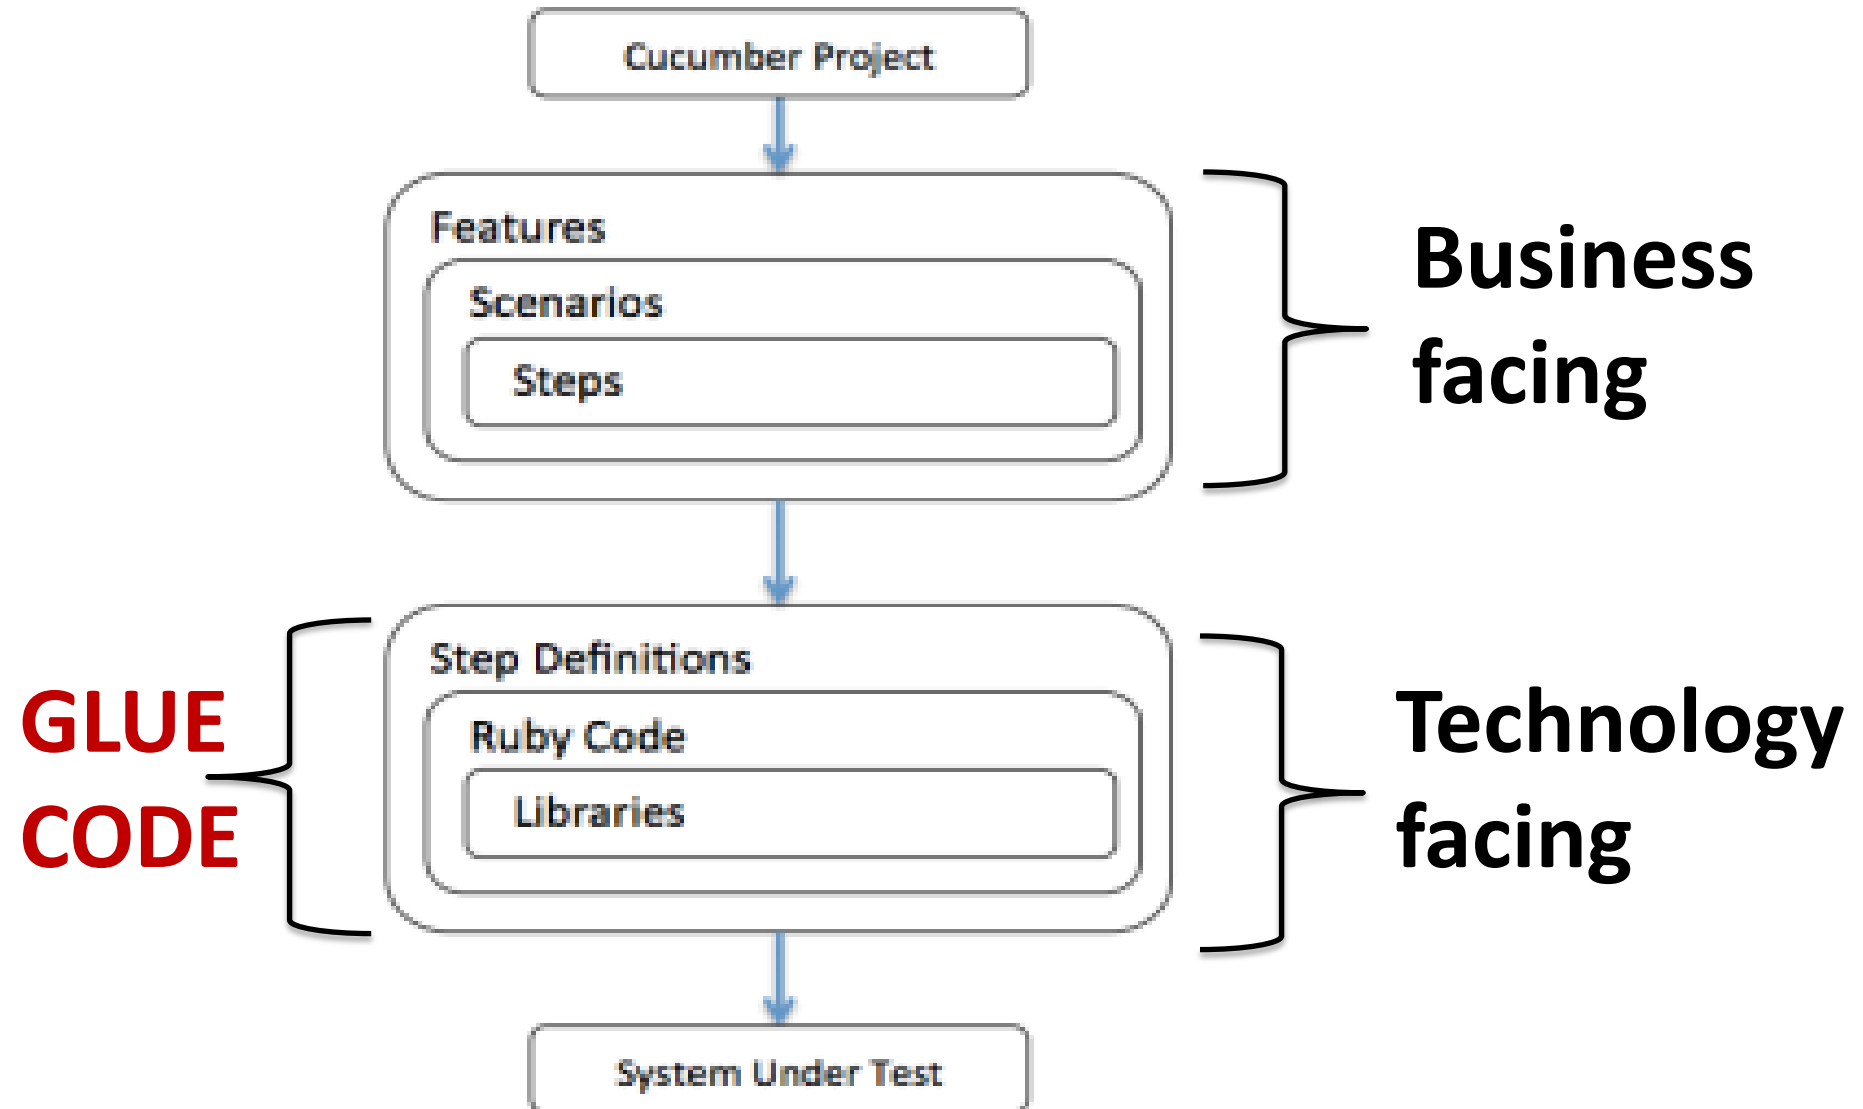

Given I have a hello app with "Howdy"

When I ask it to say hi

Then it should answer with "Howdy World"

* *Given-When-Then* are **Steps**

Cucumber Testing Stack

Gherkin - Sample Feature file

Feature: Hello World

Scenario: Say hello

Given *I have a hello app with "Howdy"*

When *I ask it to say hi*

Then *it should answer with "Howdy World"*

* **Given-When-Then** are called as **Steps**

Step Definitions...Cucumber/Ruby/Java/.NET..

@Given("^I have a hello app with \"([^\"]*)\"\$")

```
public void I_have_a_hello_app_with(String greeting)
{
    hello = new Hello(greeting);
}
```

@When("^I ask it to say hi\$")

```
public void I_ask_it_to_say_hi()
{
```

hi = hello.sayHi(); <----- **SUT**

```
}
```

@Then("^it should answer with \"([^\"]*)\"\$")

```
public void it_should_answer_with(String expected Hi)
{ assertEquals(expectedHi, hi); }
```

SUT...

```
public class Hello
{
    private final String greeting;
    public Hello(String greeting)
    {
        this.greeting = greeting;
    }
    public String sayHi()
    {
        return greeting + " World";
    }
}
```

Feature Result for Build: 2

Below are the results for this feature:

Feature: Account Holder withdraws cash

As an Account Holder

I want to withdraw cash from an ATM

So that I can get money when the bank is closed

Scenario Outline: Account has sufficient funds

Given the account balance is 100

And the card is valid

And the machine contains 100

When the Account Holder requests 20

Then the ATM should dispense 20

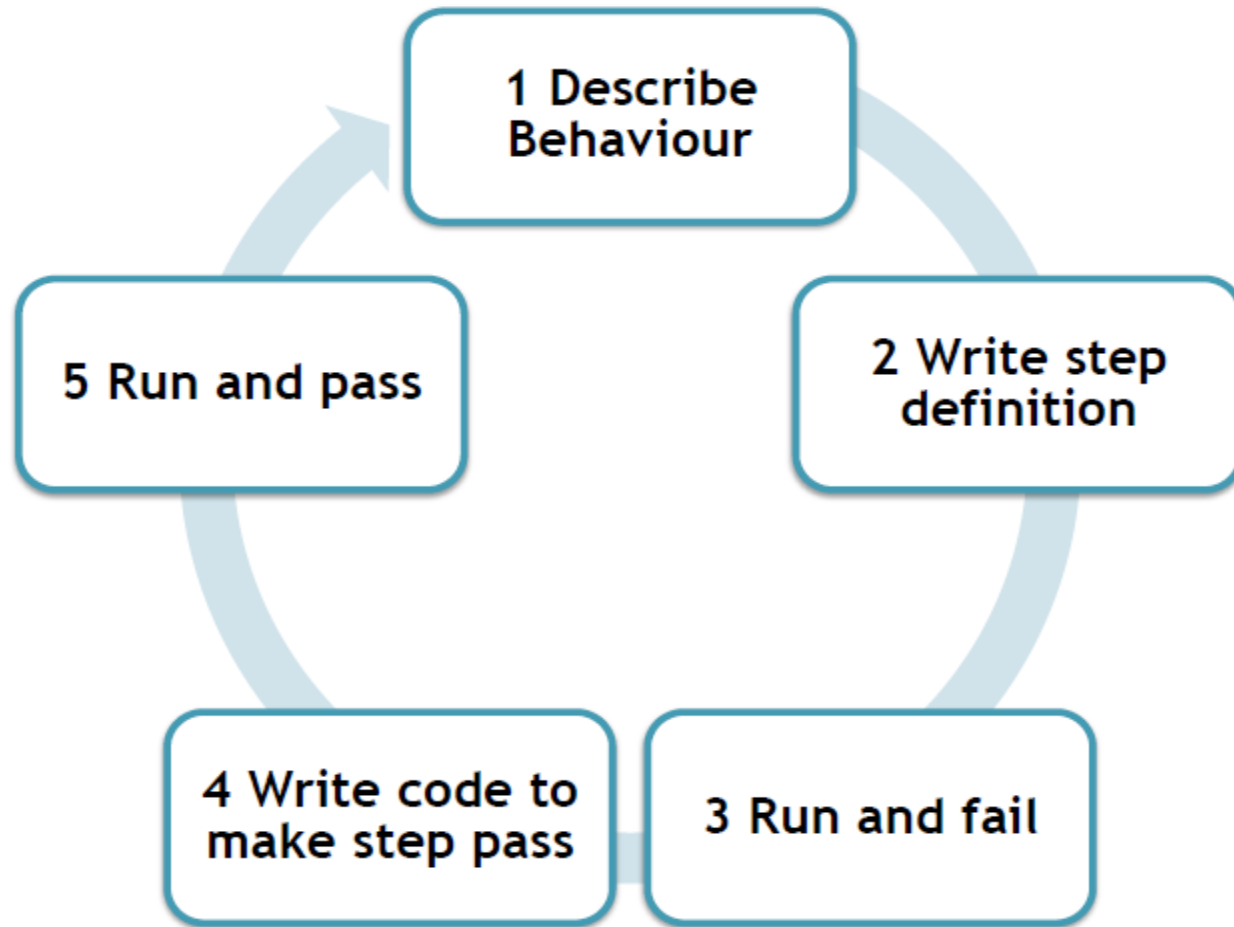

And the account balance should be 80

And the card should be returned

Feature Statistics

Feature	Scenarios	Steps	Passed	Failed	Skipped	Status
Feature: Account Holder withdraws cash	1	7	7	0	0	passed

Complete BDD Cycle

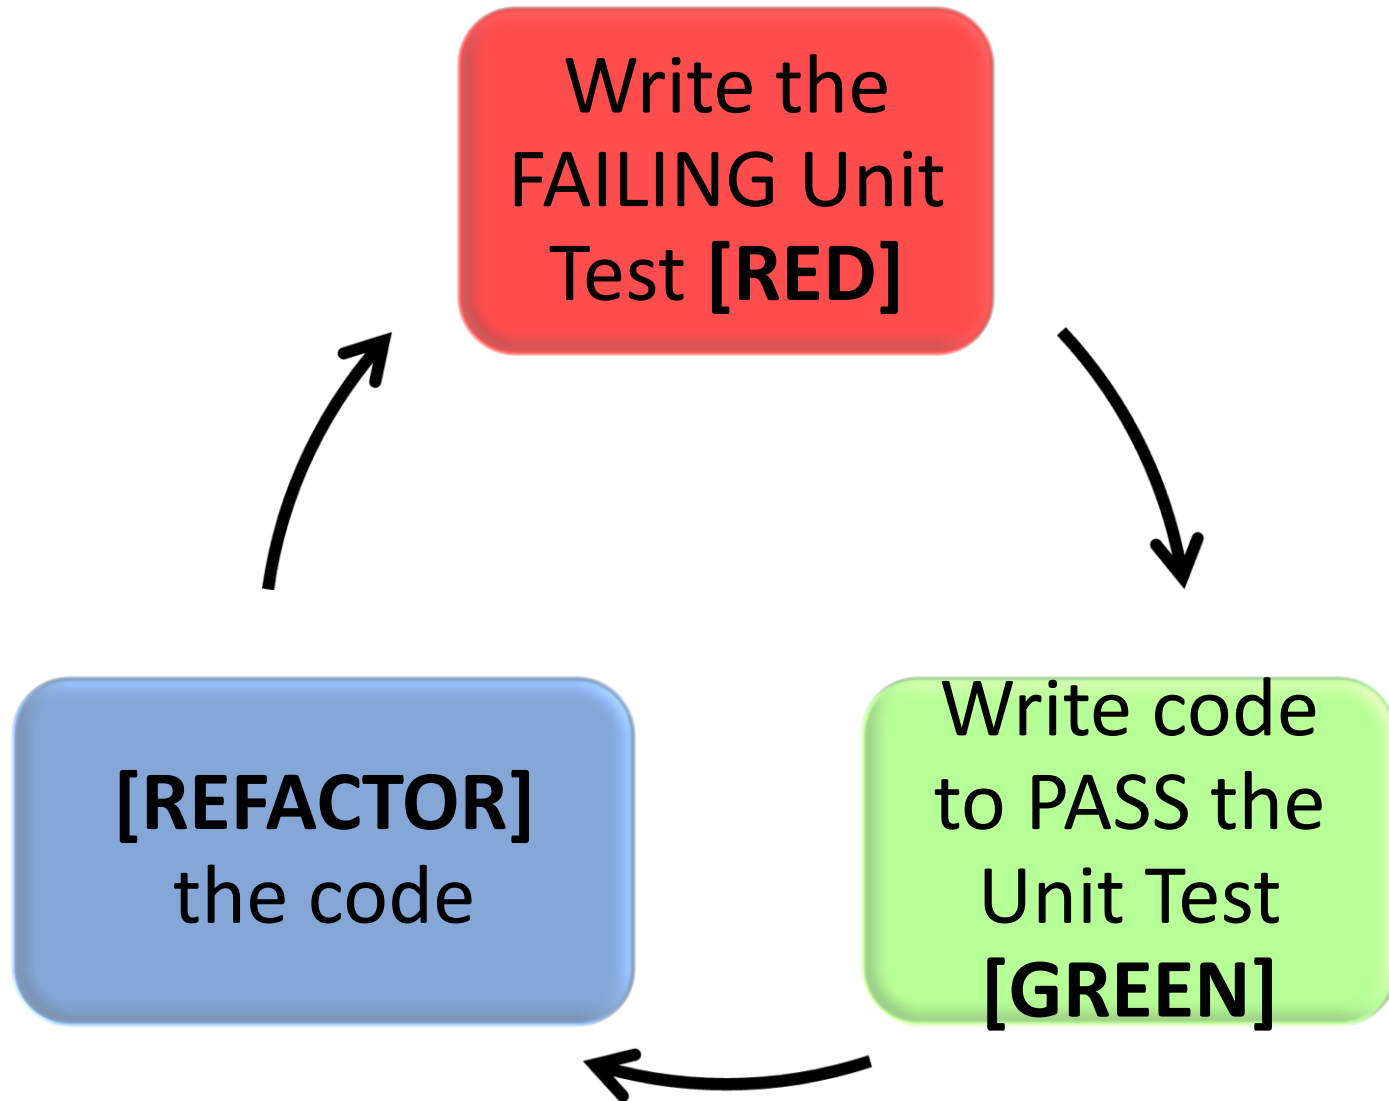

Cucumber

BDD / TDD ?

BDD : Team gets feedback from the Product Owner

TDD : Coder gets feedback from code

Test Driven Development

Write a failing
acceptance test

ATDD – TDD

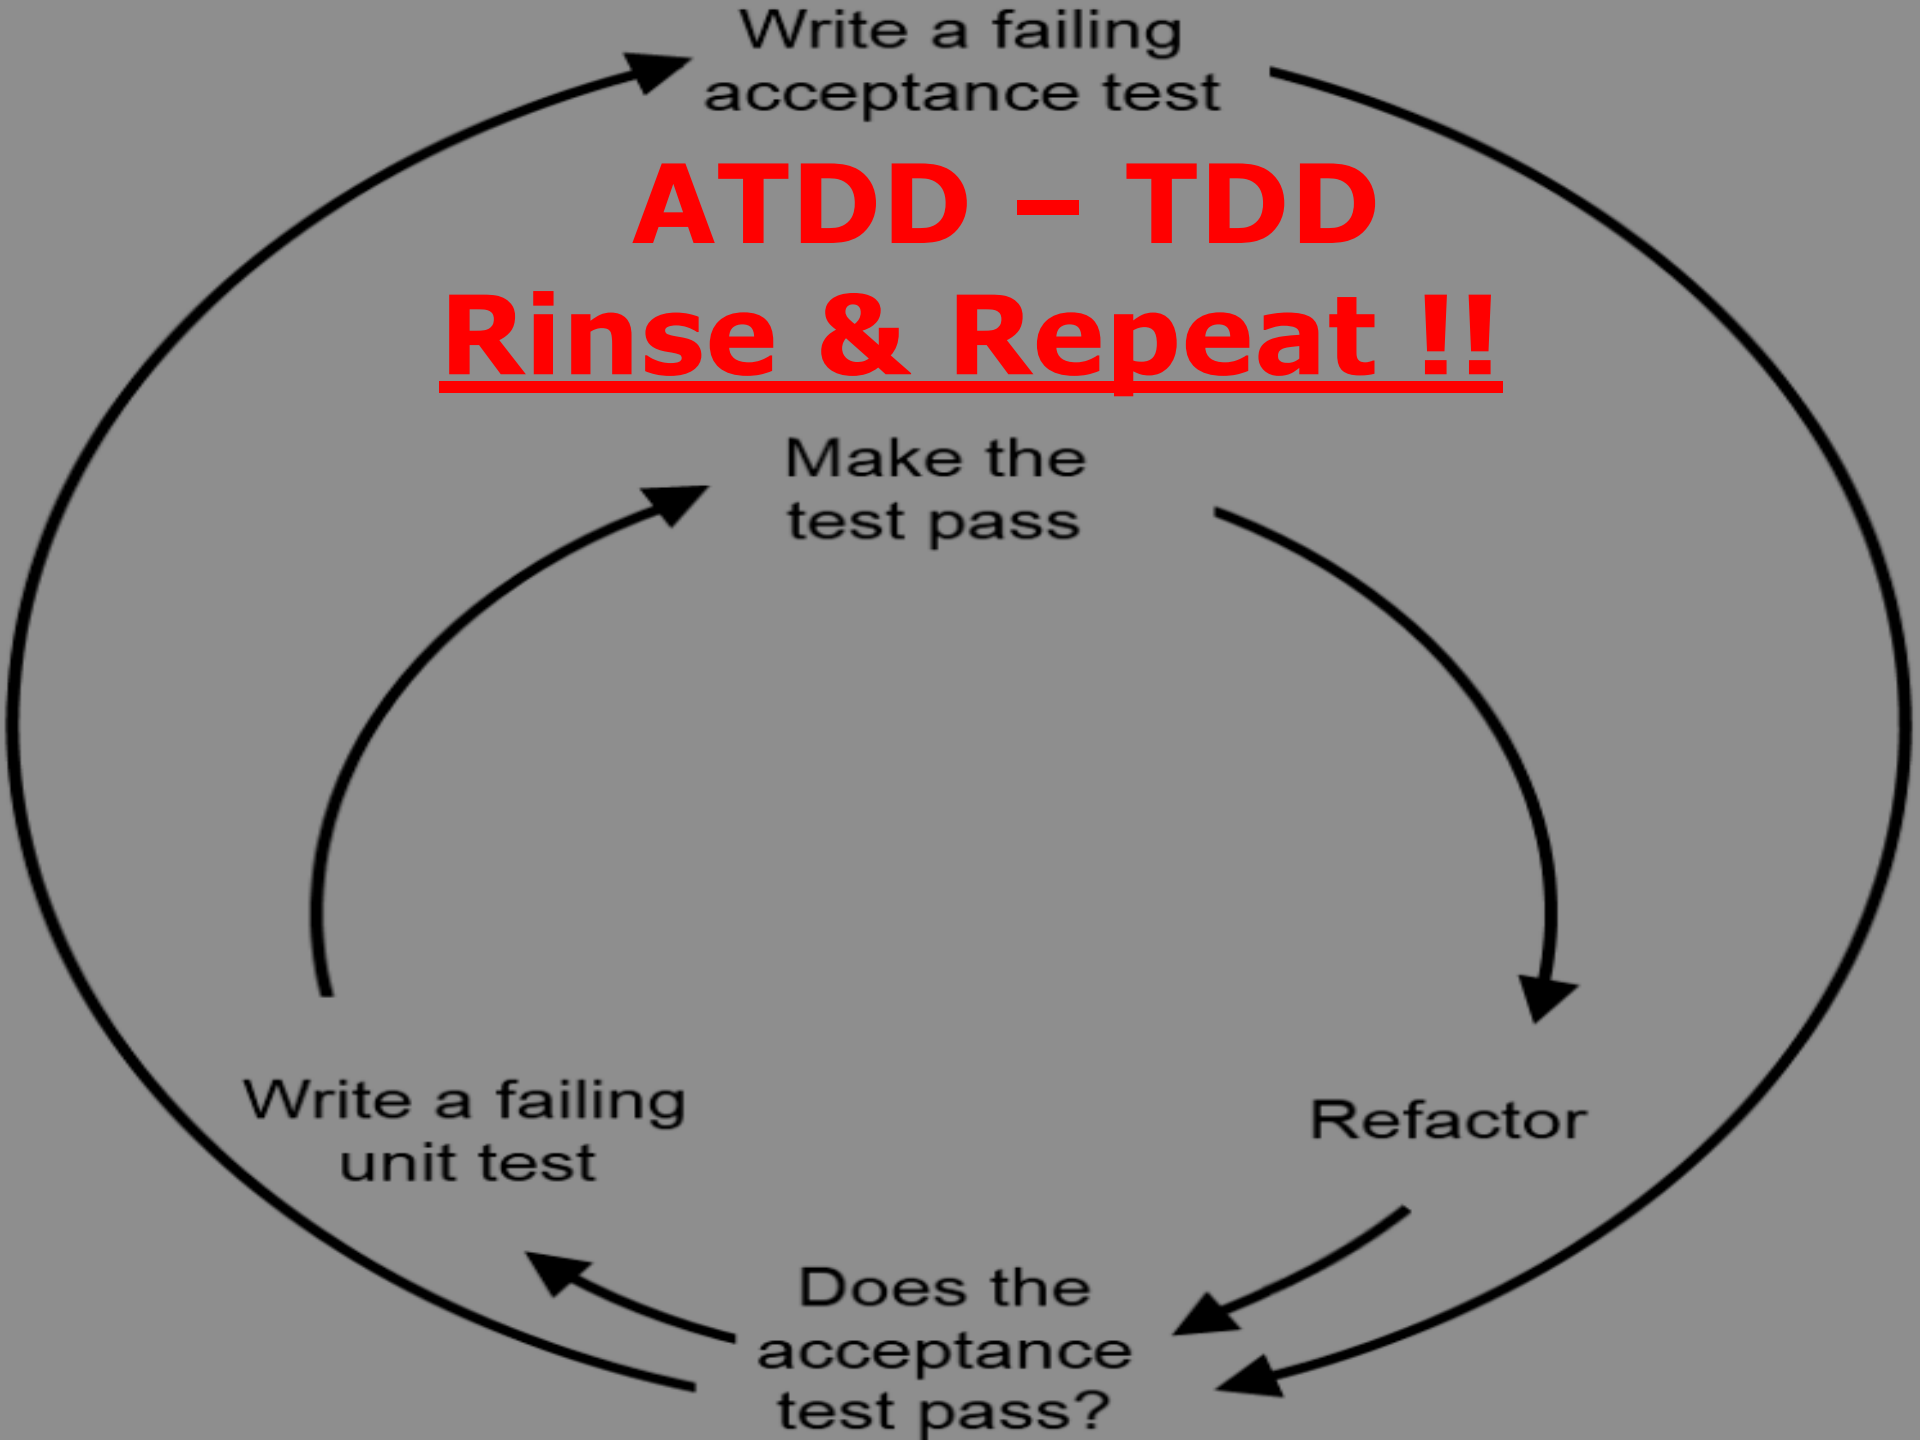

Rinse & Repeat !!

Make the
test pass

Refactor

Write a failing
unit test

Does the
acceptance
test pass?

In the end

BDD is a second generation, outside-in, pull based, multiple stakeholder, multiple-scale, high automation, agile methodology. It describes a cycle of interactions with well defined outputs, resulting in the delivery of working, tested software that matters

- Dan North

BDD : The real INTENT ?

COLLABORATION

Are you ready to CUKE....?

- Simple App [Java, Cucumber JVM]
- Web App [Java, Cucumber JVM, Selenium]

Thank you!
